

VACON 20
AC DRIVES

QUICK GUIDE

This quick guide includes the essential steps for easy installation and setup of your Vacon 20 frequency converter. Before commissioning your drive, download and read the complete Vacon 20 User Manual available at:
www.vacon.com -> Support & Downloads

1. SAFETY

ONLY A COMPETENT ELECTRICIAN IS ALLOWED TO CARRY OUT THE ELECTRICAL INSTALLATION!

This quick guide contains clearly marked warnings which are intended for your personal safety and to avoid any unintentional damage to the product or connected appliances.

Please read these warnings carefully:

The components of the power unit of the frequency converter are live when Vacon 20 is connected to mains. Coming into contact with this voltage is extremely dangerous and may cause death or severe injury.

The motor terminals U, V, W (T1, T2, T3) and the possible brake resistor terminals - / + are live when Vacon 20 is connected to mains, even if the motor is not running.

The control I / O-terminals are isolated from the mains potential. However, the relay output terminals may have a dangerous control voltage present even when Vacon 20 is disconnected from mains.

The earth leakage current of Vacon 20 frequency converters exceeds 3.5 mA AC. According to standard EN61800-5-1, a reinforced protective ground connection must be ensured.
See Chapter 7!

If the frequency converter is used as a part of a machine, the machine manufacturer is responsible for providing the machine with a main switch [EN 60204-1].

If Vacon 20 is disconnected from mains while running the motor, it remains live if the motor is energized by the process. In this case the motor functions as a generator feeding energy to the frequency converter.

After disconnecting the frequency converter from the mains, wait until the fan stops and the display segments or status leds on the front panel go out. Wait 5 more minutes before doing any work on Vacon 20 connections.

The motor can start automatically after a fault situation, if the autoreset function has been activated.

2. INSTALLATION

2.1 Mechanical installation

There are two possible ways to mount Vacon 20 in the wall. For MI1 - MI3, either screw or DIN-rail mounting; For MI4 - MI5, screw or flange mounting.

Figure 1: Screw mounting, MI1 - MI3

Figure 2: Screw mounting, MI4 - MI5

Figure 3: DIN-rail mounting, MI1 - MI3

Figure 4: flange mounting, MI4 - MI5

Note! See the mounting dimensions on the back of the drive.
 Leave **free space** for cooling above (**100 mm**), below (**50 mm**), and on the sides (**20 mm**) of Vacon 20! (For MI1 - MI3, side-to-side installation allowed only if the ambient temperature is below 40 °C; For MI4 - MI5, side-to-side installation is not allowed.)

4.2 Commissioning and startup wizard

4.2.1 Commissioning steps:

1. Read safety instructions on page 1	7. Perform test run without motor , see the User Manual at www.vacon.com
2. Secure the grounding and check that cables comply with requirements	8. Run no-load tests without motor being connected to the process
3. Check quality and quantity of cooling air	9. Perform an identification run [Par. ID631]
4. Check that all start / stop switches are in STOP position	10. Connect the motor to the process and perform test run once again
5. Connect the drive to mains	11. Vacon 20 is now ready for use
6. Run the Startup wizard and set all necessary parameters	

Table 3: Commissioning steps

4.2.2 Startup wizard

Vacon 20 runs the startup wizard in first power-up. The wizard can be run by setting SYS Par.4.2 =1. The following figures show the procedure.

NOTE! Running the startup wizard will always return all parameter settings to their factory defaults!

	MI5	414	165	202	10
Supply network	Networks	Vacon 20 (400 V) cannot be used with corner grounded networks			
	Short circuit current	Maximum short circuit current has to be < 50 kA, For MI4 without DC-choke, maximum short circuit current has to be < 2.3 kA, for MI5 without DC-choke, maximum short circuit current has to be < 3.8 kA.			
Motor connection	Output voltage	0 - U _{in}			
	Output current	Continuous rated current I _N at ambient temperature max. +50 °C (depends on the unit size), overload 1.5 x I _N max. 1 min / 10 min			
Ambient conditions	Ambient operating temperature	-10 °C (no frost)...+40 / 50 °C (depends on the unit size): rated load-ability I _N Side by side installation for MI1-3 it is always 40 °C; For IP21/ Nema1 option in MI1-3 the maximum temperture is also 40 °C.			
	Storage temperature	-40 °C...+70 °C			
	Relative humidity	0...95% RH, non-condensing, non-corrosive, no dripping water			
	Altitude	100% load capacity (no derating) up to 1000 m. 1% derating for each 100 m above 1000 m; max. 2000 m			
	Enclosure class	IP20 / IP21 / Nema1 for MI1-3, IP21 for MI4-5			
	Pollution degree	PD2			
EMC	Immunity	Complies with EN50082-1, -2, EN61800-3			
	Emissions(See detailed descriptions in Vacon 20 User Manual at: www.vacon.com)	230V : Complies with EMC category C2; With an internal RFI filter. MI4&5 complies C2 with an optional DC choke and CM choke. 400V: Complies with EMC category C2; With an internal RFI filter MI4&5 complies C2 with an optional DC choke and CM choke. Both: No EMC emission protection (Vacon level N): Without RFI filter			
Standards		For EMC: EN61800-3, For safety: UL508C, EN61800-5			
Certificates and manufacturer's declarations of conformity		For safety: CE, UL, cUL, For EMC: CE, c-tick (see unit nameplate for more detailed approvals)

- With above-mentioned fuses, the drive can be connected to power supply the short circuit current of which is max. 50 kA
- Use cables with heat resistance of at least +70 °C.
- The fuses function also as cable overload protection.
- These instructions apply only to cases with one motor and one cable connection from the frequency converter to the motor.
- To fulfil standard EN61800-5-1, the protective conductor should be **at least 10 mm² Cu or 16 mm² Al**. Another possibility is to use an additional protective conductor of at least the same size as the original one.

Quick Modbus setup

1	A: Select Fieldbus as remote control place: P2.1 to 1 – Fieldbus B: Set Modbus RTU protocol to "ON": S2.2 to 1 – Modbus
2	A. Set Control Word to "0" (2001) B. Set Control Word to "1" (2001) C. Frequency converter status is RUN D. Set Reference value to "5000" (50,00%) (2003) E. Actual Speed is 5000 (25.00 Hz if MinFreq is 0.00 Hz and MaxFreq is 50.00 Hz) F. Set Control Word to "0" (2001) G. Frequency converter status is STOP
